Personal Statement

As a passionate and focused Software Developer, I bring a strong foundation in coding and a relentless drive for continuous learning. My keen eye for detail and problem-solving skills have been sharpened through various freelance projects and personal endeavours, enabling me to work independently, manage projects efficiently, and deliver high-quality results. With proficiency in both front-end and back-end technologies and extensive experience with a variety of game engines, I am adept at translating these skills to new platforms seamlessly. In addition to my technical capabilities, I am deeply interested in the growing competence of AI and its potential to enhance human productivity. I am committed to staying at the forefront of technological advancements and am eager to apply innovative solutions in a responsible manner.

Technical Skills

Programming Languages: C#, JavaScript, Python, HTML, CSS, JSON

Frameworks: .NET, React, Redux, Django, Node.js, Express.js, Unity, SQLite, SQL Server, MongoDB

Tools: Git, GitHub, Visual Studio

Work Experience

Freelance App Developer – Touzie Tyke

June 2015 – October 2017

- Developed the Study Aid App “Study Ninja” and virtual board game “The Enterprise Game” using the **Unity** game engine and **C#**.
- Utilized the cross platform tools in **Unity** to deploy Study Ninja to **Android** and **iOS**.
- Worked with artists to implement their visual assets into **Unity**.

Personal Projects

Cubic Locales App

July 2024 – Current

- Created a full-stack web application for storing information about Minecraft builds.
- Built an API using **.NET** that allows **CRUD** operations to be performed on an **SQLite** database.
- Built a React web application that consumes the **.NET** API and provides users with a satisfying interface.
- **.NET** API deployed using **Azure** and **React** web application deployed using **Vercel**.
- Live project can be found at mc-places-react-client.vercel.app

Daily Objectives App

June 2018 – August 2018

- Created a web app for managing daily objectives using **React/Redux** for the front-end and **Node.js/Express** on the back-end.
- Implemented a **MongoDB** database for storing user details and their objectives.
- Used **media queries** in **CSS** code to ensure the web app looks good on viewports of varying sizes.
- Developed a simple **user authentication** system.

Education

BSc (Hons) in Computer Games Development, University of the West of Scotland

Classification: 1st Class
